Mr. Gallivan called me at 4:20 today (January 24, 2013). He wanted to get a sense of the difference in scale between the Portland Harbor site and the Scappoose Bay project. I walked him through the DEQ 2012 Milestone Report figures on DEQ's Portland Harbor web page that illustrates the scope of DEQ's upland source control effort. I also described the in-water site boundary as approximately river mile 1.5 to 11.5.

Mr. Gallivan asked if the Portland Harbor site and the Scappoose Bay project are linked. I said that they are not. I pointed out that Scappoose Bay is a considerable distance downstream from the Portland Harbor project. I also noted that the Lower Willamette Group investigated sediment impacts in the upstream portion of Multnomah Channel and that it is my understanding that sediment impacts in the channel did not warrant further work. However, I said that on this point I felt that I was speaking to the EPA portion of the project and requested that he discuss this with either Chip Humphrey or Kristine Koch who are the EPA co-project managers for the Portland Harbor project. I provided Mr. Gallivan Chip and Kristine's phone #s.

Mr. Gallivan also noted that it appears that the Scappoose Bay projects are more upland projects than in-water. I noted that the Scappoose Bay project does include in-water work, but I referred him back to Deborah Bailey as I am not familiar with the details.

Matt McClincy

**Date and Time Contacted:** January 24, 2013

**Publication/Station:** Portland Tribune

**Reporter's Name and Phone Number:** Joseph Gallivan 503-936-5326

**Topic Discussed:** Follow-up to earlier e-mail on the Scappoose Bay cleanup sites (Armstrong World Industries, Boise Cascade Pulp and Paper Mill, Port of St. Helens Former Creosote Site, Multnomah Plywood). Mr. Gallivan is writing an article for the Sustainable Living Section of the Portland Tribune. He had asked me to verify some text he is planning to include in an article pertaining to the location of the sites. He will be submitting the article today or tomorrow. It will be in the Sustainable Living Section of the Portland Tribune. We discussed the location of the sites with respect to Scappoose Bay and Multnomah Channel. He also asked some questions about the Portland Harbor project. I have referred him to Matt for those questions.
